Developer reference · v1.0

Mobile Pattern Guidelines

Six cross-portal patterns to build from — not a redesign of existing screens. Check new and revised mobile screens against these before shipping.

Brand foundation

Every pattern below is built from these tokens — nothing new is introduced.

- Hatch Yellow #FFCF01
- Sunset Orange #E69E2D
- Eggshell Grey #F2F0EF
- Midnight Charcoal #231F20

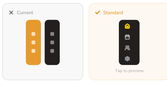
Aa — **Baloo** — headings, titles, nav labels
Nunito — body, buttons, UI labels

Pattern 1 of 6

Navigation — expandable side rail

Problem: Vendor, and Admin each render a thin icon-only sidebar with cramped tap targets, no labels, and a color that flips between Sunset Orange and Midnight Charcoal screen to screen.

Navigation stays on the side. The rail stays slim and icon-only by default; tapping it slides open a labeled panel, then collapses back — one fixed color everywhere.



Collapsed: 32–36px · Expanded: ~45% width
Transition: 220ms ease-out · Rail: #231F20
Active: #FFCF01

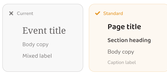
Applies to: EO · Vendor · Admin

Pattern 2 of 6

Typography scale

Problem: Font and body sizes vary screen to screen with no consistent scale to reference, so text hierarchy feels arbitrary.

One fixed type scale, used everywhere — Baloo for headings, Nunito for everything else.



Page title: 18px · Baloo 600 · Heading: 15px · Baloo 600
Body: 14px · Nunito 400 · Caption: 12px · Nunito 500
Button: 14px · Nunito 600

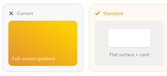
Applies to: Public · EO · Vendor · Admin

Pattern 3 of 6

Surface & background

Problem: Screens sit on a warm gradient background, others on flat white or grey, with no logic to which.

Eggshell Grey as the default app background, white for cards and sheets. Hatch Yellow and Sunset Orange are accents only — never full-screen gradients.



Background: #F2F0EF · Card fill: #FFFFFF
Border: 1px #E5E1DD · Radius: 12px

Applies to: Public · EO · Vendor · Admin

Pattern 4 of 6

Buttons

Problem: CTAs appear as pill-shaped orange buttons in some flows and rectangular yellow buttons with a different radius in others.

One primary button and one secondary button, used consistently everywhere.

Height: 48px · Radius: 12px · Label: 14px · Nunito 600
Primary: #E69E2D fill · Secondary: outline #231F20

Applies to: Public · EO · Vendor · Admin

Pattern 5 of 6

Empty states

Problem: Empty states pair the Hatchi mascot with friendly copy, others are bare text with no illustration at all.

Every empty state pairs a small Hatchi illustration with one line of friendly copy and, where relevant, a primary action.

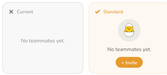


Illustration: 64–80px · Copy: 14px · 70% opacity
Gap to CTA: 16px

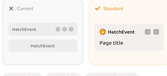
Applies to: EO · Vendor · Admin

Pattern 6 of 6

Header / top bar

Problem: Each mockup, icon cluster, and page title show up in different combinations screen to screen.

A fixed header anatomy — logo lockup left, max two utility icons right, page title in Baloo directly below.

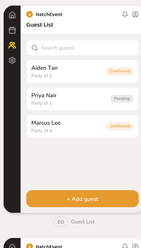


Height: 56px · Logo: 24px · Icons: max 2 · 20px
Title: 18px · Baloo 600

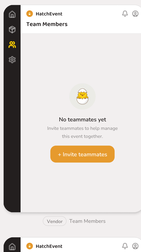
Applies to: Public · EO · Vendor · Admin

Example screens

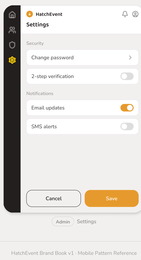
Three real screen types built entirely from the patterns above — for reference, not as replacements for the existing 46 screens.



EO · Guest List



Vendor · Team Members



Admin · Settings
